

# **WEEK-1**

## **PROGRAM-1**

**Q. Check if a given sub string is present in a given main string :**

```
#include<string.h>
```

```
#include<stdio.h>
```

```
#include<ctype.h>
```

```
int findSubString(char* mainString,char* subString,int mainLength,int subLength,int position,int subPosition)
```

```
{
```

```
    if(position >= mainLength || subPosition >= subLength)
```

```
    {
```

```
        return 1;
```

```
    }
```

```
    if(isspace(subString[subPosition]))
```

```
    {
```

```
        return 1;
```

```
    }
```

```
    if(mainString[position] == subString[subPosition])
```

```
    {
```

```
        return findSubString(mainString,subString,mainLength,subLength,position + 1,subPosition + 1);
```

```
    }
```

```
    return 0;
```

```
}
```

```
int main()
```

```
{
```

```
    char mainString[100];
```

```
    char subString[100];
```

```
    int mainLength;
```

```
    int subLength;
```

```
    int i;
```

```
    int found = 0;
```

```
    printf("Enter main string : ");
```

```
    fgets(mainString, 100, stdin);
```

```
    printf("Enter sub string : ");
```

```
    fgets(subString, 100, stdin);
```

```
    mainLength = strlen(mainString);
```

```
    subLength = strlen(subString);
```

```
for(i = 0; i < mainLength - 1 ; i++)
{
    if(mainString[i] == subString[0])
    {

        if(findSubString(mainString,subString,mainLength,subLength,i,0))
        {

            printf("Input substring is found on position %d ",i+1);

            found = 1;

            break;

        }

    }

}

if(found == 0)
{

    printf("Input substring is not found in the string...");

}

}
```

```
Command Prompt
C:\Users\Sanam\Desktop>GCC DSLAB.C
C:\Users\Sanam\Desktop>A
Enter main string : SANMAT
Enter sub string : AMN
Input substring is found on position 2
C:\Users\Sanam\Desktop>A
Enter main string : SANMAT
Enter sub string : ADVN
Input substring is not found in the string...
C:\Users\Sanam\Desktop>
```

## ***PROGRAM-2***

**Q. Print all the permutations of the given string :**

```
#include<stdio.h>
```

```
#include<string.h>
```

```
void swap(char *x, char *y)
```

```
{
```

```
    char temp;
```

```
    temp = *x;
```

```
    *x = *y;
```

```
    *y = temp;
```

```
}
```

```
void permute(char *a, int l, int r)
```

```
{
```

```
    int i;
```

```
    if (l == r)
```

```
        printf("%s\n", a);
else
{
    for (i = l; i <= r; i++)
    {
        swap((a+l), (a+i));
        permute(a, l+1, r);
        swap((a+l), (a+i));
    }
}
}

int main()
{
    char str[10];

    printf("Enter the string : \n");

    scanf("%s", str);

    int n = strlen(str);

    permute(str, 0, n-1);

    return 0;
}
```

```
Command Prompt
C:\Users\Sanam\Desktop\week1>gcc rec2.c
C:\Users\Sanam\Desktop\week1>a
Enter the string :
abcd
abdc

## PROGRAM-2

**Q. Creat a Binary tree and check if it's a Binary Search tree :**

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
void insert(int *t, int key);
```

```
void preorder(int *t, int i);
```

```
int ifBTS(int *t, int i);
```

```
int main()
```

```
{
```

```
    int i, ch, num;
```

```
    int t[100];
```

```
    for(i=0;i<100;i++)
```

```
        t[i]=-1;
```

```
    while(1)
```

```
    {
```

```
        printf("\n1:Insert\n2:Preorder\n3:Check for Binary search tree\n");
```

```
        printf("Enter your choice : \n");
```

```
        scanf("%d", &ch);
```

```
        switch(ch)
```

```

{
    case 1:printf("Enter the value : ");
        scanf("%d", &num);
        insert(t, num);
        break;
    case 2:preorder(t,0);
        break;
    case 3:if(ifBTS(t,0))
    {
        printf("The above tree is a Binary search tree\n");
    }
